General information

Products – Generally available in stock.

Special request products. May be in stock in low quantities. To produce a new batch, we need commitment on min. 20 packs before scheduling manufacturing.

CE Marking

All products are CE marked according to the European IVD Directive 98/79/EC for In Vitro Diagnostic Medical Devices. IVDR is underway and expected in 2027.

Storage

Most tablets are stored at room temperature. All products marked  must be stored refrigerated at 2-8°C. Transports can occur without cold chain.

Packaging

NEO-SENSITABS™

(Product codes ending on 12)

Neo-Sensitabs™ are packed in single cartridges containing 50 tablets. Sales unit size contains 5 cartridges x 50 tablets in one box = 250 tablets.

DIATABS™

(Product codes ending on 11)

Diatabs™ are packed in single vials containing 50 tablets. Sales unit size contains 5 vials x 50 tablets = 250 tablets wrapped in film.

ROSCO DIAGNOSTICA KITS™

(Product codes beginning with 98)

All Rosco Diagnostica Kits include 50 tests except kit no. 98012 that include 100 tests.

Accessories

Accessories are packed individually in boxes containing 1 dispenser per box

Reagents

All reagents are packed in boxes containing 1 x 20 ml + pipette.

Instructions for Use – All products

The Instructions for use are available on our website www.rosco-diagnostica.com in PDF format in up to 8 different languages.

ROSCO DIAGNOSTICA KITS™

- For detection of resistance mechanisms
- Simplified and easy-to-use testing

Rosco Diagnostica acknowledges the need for detection of resistance mechanisms. In order to supply our customers/users with a convenient system for detection, assembled kits with disc diffusion tablets are available.

1. BETA – LACTAMASES

a) Rapid Colorimetric Kits (15 min-1 hour)

98022 - Rapid ESBL Screen kit: ESBLs
 98023 - Rapid BLUE CARB Kit: Carbapenemases
 98024 - Neo-Rapid CARB Kit: Carbapenemases

Rosco Diagnostica Rapid Colorimetric Kits have the following advantages compared to competitors:

- More rapid results
- No reagent preparation needed
- Longer shelf-life
- Stable crystalline forms of antimicrobials
- Simple and fast procedure 5 min/test
- Reduced amounts of lysis buffer
- Lower cost
- Possibility to detect new genetic variants of resistance mechanisms (compared to PCR)

b) Phenotypic Methods (18 hours)

98007 - AmpC Confirm Kit: AmpC Enterobacteriaceae
 98008 - ESBL + AmpC Screen Kit: ESBL + AmpC
 98010 - Triple disk for detection of KPC+MBL
 (Special request)
 98011 - ESBL Confirm (acc to CLSI) Kit: ESBLs
 98012 - ESBL Confirm (Chrom AmpC) Kit: ESBLs
 98014 - Total ESBL Confirm Kit: ESBLs
 98015 - KPC, MBL and OXA-48 Confirm Kit:
 Carbapenemases
 98016 - Total Metallo-beta-lactamase Confirm Kit: MBLs
 (Special request)
 98019 - Total ESBL+AmpC Confirm Kit: ESBL + AmpC
 98025 - KPC/MBL in P.aeruginosa/Acinetobacter, version 2

ROSCO DIAGNOSTICA KITS™

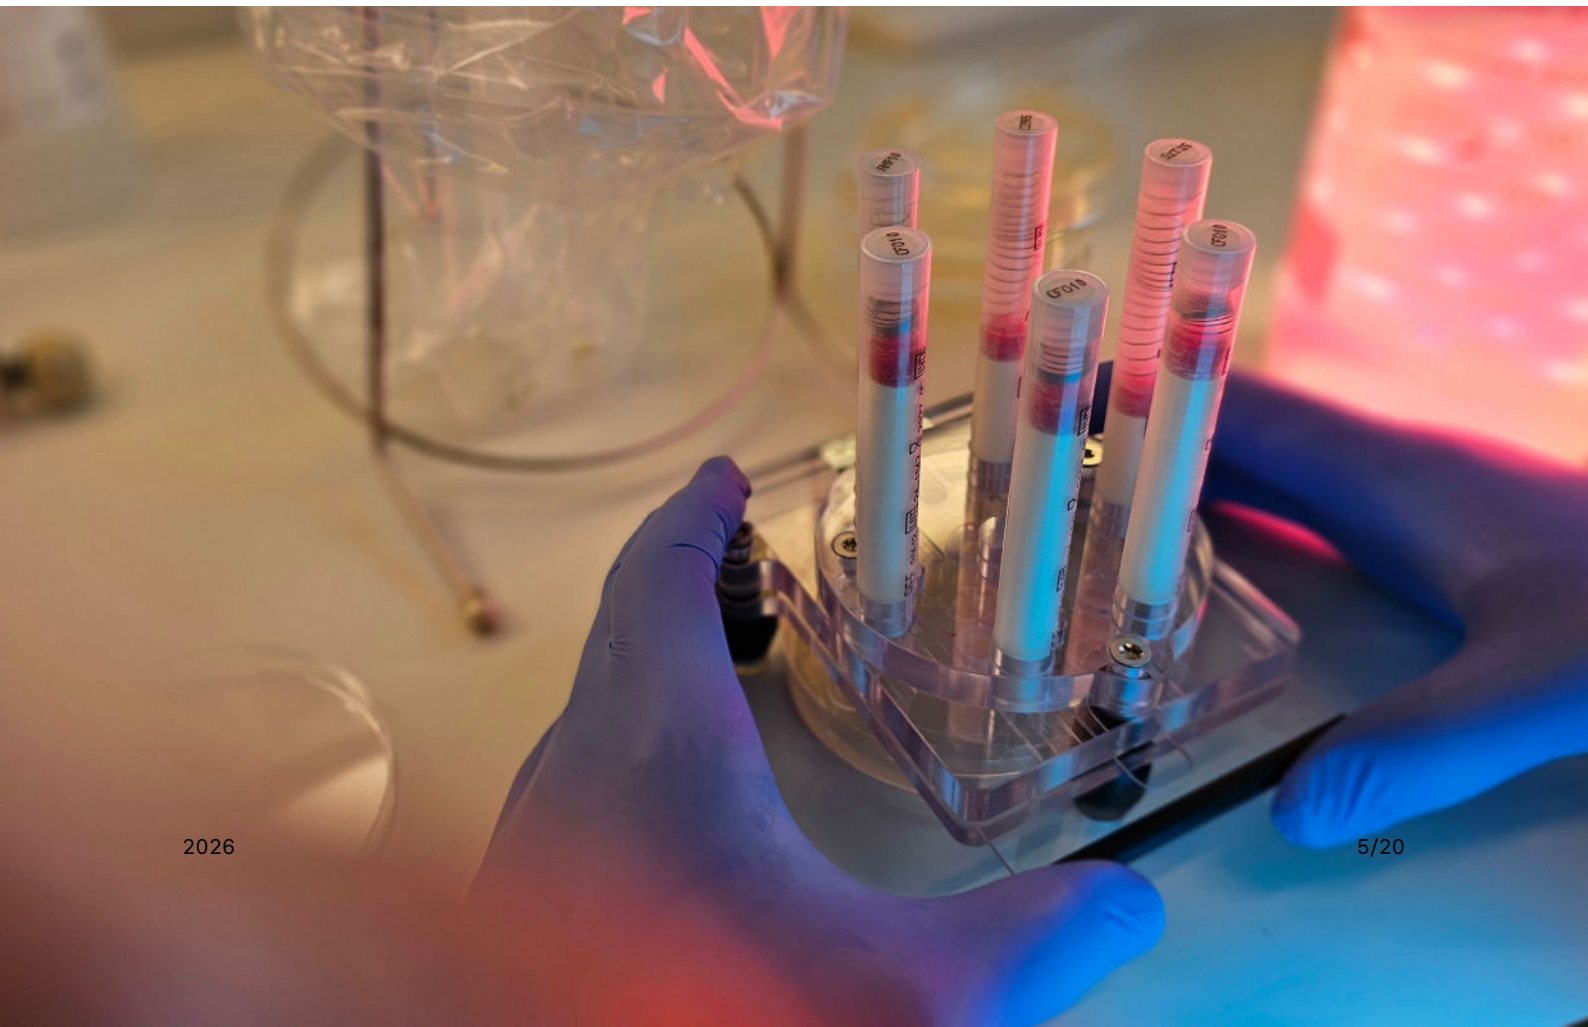

WHY PHENOTYPIC METHODS?

Phenotypic methods are useful for detection of beta-lactamases. They are cheap and easy to perform and interpret. Molecular techniques, on the contrary, are expensive, require significant expertise and do not identify novel and emerging resistance genes or even slightly structurally modified genes.

2. OTHERS

- 98009 - Urine Kit Private Practice
- 98017 - Detection of hVISA, GISA, VRE, Daptomycin resistance (Special request)
- 98018 - Detection of COLISTIN resistance in Enterobacteriaceae, *P. aeruginosa* and *Acinetobacter* spp (Special request).

The kits are complete with ready-to-use cartridges of the necessary combined NEO-SENSITABS™ or DIATABS™ and a guide to their use. Documentation is available at www.rosco-diagnostica.com/documentation

DIATABS™

Identification of Bacteria and Fungi

Rapid tests (4 hours) based on enzymatic reactions

Long shelf-life: 2 to 4 years

- Highly Flexible
 - Can be used in combination with Neo-Sensitabs™ helping laboratory professionals make a rapid, accurate diagnosis
- Versatile - Multiple Purpose
 - The Diatabs™ system offers the opportunity of finding the most appropriate and economical tests for your purpose.
 - Screening tests for identification or differentiation
 - Identification of most common species
 - Supplemental and confirmatory tests to automatic systems and commercial kits
 - Full species identification
- Economical Solution
 - Cost saving of up to 50% compared with available automatic systems.

Rosco Diagnostica's concept for the diagnostic tablets
DIATABS™ is the flexible choice in identification of important bacterial species.

NEO-SENSITABS™

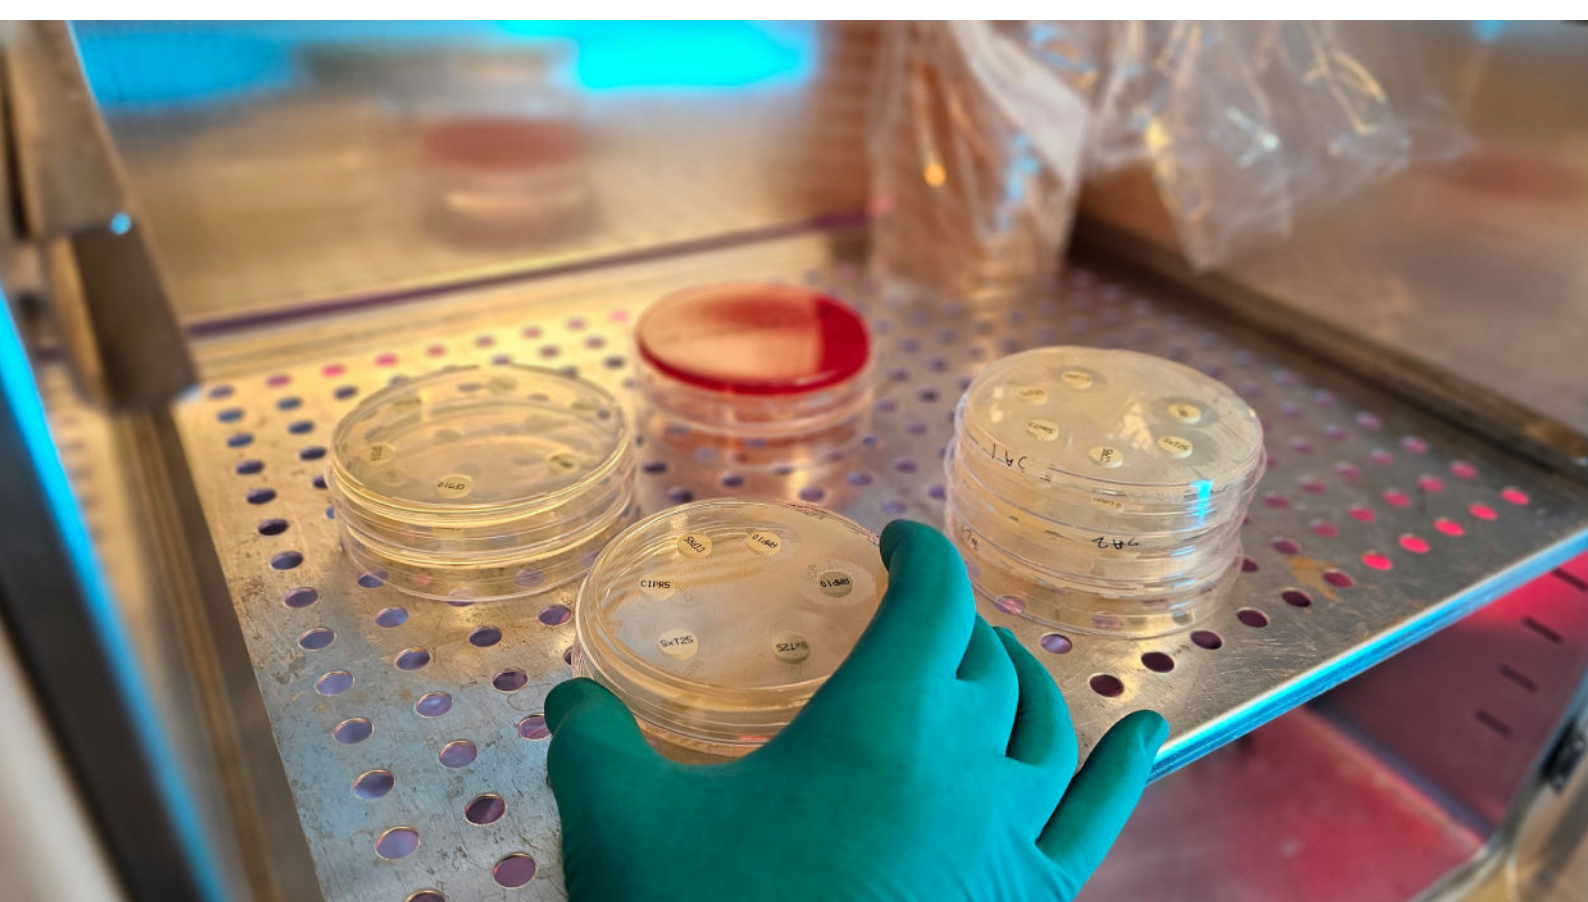

Susceptibility Testing

Unique characteristics ensure that NEO-SENSITABS™ from Rosco Diagnostica are ideal for use in the laboratory:

- Long shelf- life (Due to use of active substance in dry-crystalline form)
- No degradation in activity after opening of cartridges
- Most products can be stored for 3-5 years at room temperature (25°C)
- Cost-efficient and reliable method
- Extensive information on susceptibility testing

Neo-Sensitabs™ are calibrated for susceptibility testing according to EUCAST and CLSI guidelines (Marked in product list).

Comparative studies from Rodrigues-Villalobos(1) and Justesen(2) showed excellent correlation between Neo-Sensitabs™ results (EUCAST) and paper discs.
